Kropki

Rules:

Apply standard sudoku rules. The white dots indicate all the adjacent/neighbouring cells in which the difference between the two cells is 1. The black dots indicate all the adjacent cells in which one digit is the double of the other one.

The dot between two cells with digits 1 and 2 has any of these two dots.

Mathdoku

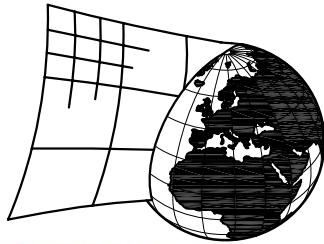

Rules

Apply standard sudoku rules. For more in each of nine nonets (3x3 squares) there are subsidiary numbers between two cells. These numbers are the results of binary operations (addition, subtraction, multiplication, or division) between the two cells. In each nonet there must be used all the four binary operations.

8	\otimes	6	5	
48	\oplus	3	\ominus	14
4	2	9		
3	1	\oplus	7	

Example: between the cells there is number 48 multiplication is only acceptable operation, that's why the candidates of the two cells are digits 6 and 8.

Sudo-kuro

Rules:

Fill the grid with digits 1 to 9. The digits can't be repeated in rows, columns, or 11 marked shapes. The numbers outside and inside the grid set the sums in horizontal or vertical directions.

3	16	19	
2	9	8	10
1	7	3	4
		11	
3		6	5
3	4	2	1

A 9x9 Sudo-kuro puzzle grid. The grid is divided into several irregularly shaped regions, some of which are shaded with diagonal lines. Clues are provided in the form of sums (e.g., 16, 15, 32, 45, 22, 35, 17, 9, 30, 45, 15, 16) placed outside the grid, indicating the total sum of digits in specific rows or columns. Some cells contain single-digit values (e.g., 5, 8, 4, 7, 2, 1, 3, 9, 6, 13, 18, 21, 27, 12, 25, 10, 24, 15, 21, 12, 17, 14). The grid has a decorative border of diagonal lines.

Pairs

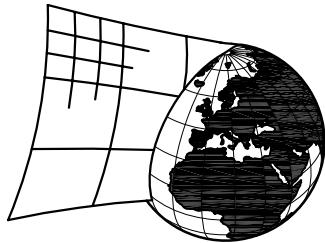

Rules:

Apply standard sudoku rules. There are pairs of cells diagonally connected and their diagonal distance corresponds to their values (see example). It stands for each pair that one digit is stated in a yellow cell and the other one is in a white cell. Every yellow cell is exactly in one of the pairs. The other digits don't have the same feature. Every digit (except 9) is in one of the pairs at least.

1	2	3	4	5
1	2			4
2		3		X
3		2	1	X
4			1	
5	4	X	X	3

Example of the pairs '2' and '4':
digit 2 in the cells 1,1 and 3,3
 $\Rightarrow 3-1 = 2$
digit 4 in the cells 1,5 and 5,1
 $\Rightarrow 5-1 = 4$

2					1				4

		2			8			9
